# Cyber Risk
Management Service

LTI
Let's Solve

Introduction

Organizations today are facing extreme challenges in terms of protecting their data systems, networks, and they are looking for a solution that will help them in tracking high risk assets and prioritize remediation efforts based on risk. LTI's Cyber Risk Management Service provides risk- based visibility into enterprise assets and associated attack surface area.

LTI Cyber Risk Management Services

The LTI Cyber Risk Management Service ingests data from a variety of security and IT tools, as well as external threat data feeds. This technology-enabled service not only aggregates internal security intelligence and external threat data, but more importantly, correlates these data feeds with its business- criticality, or risk to the organization.
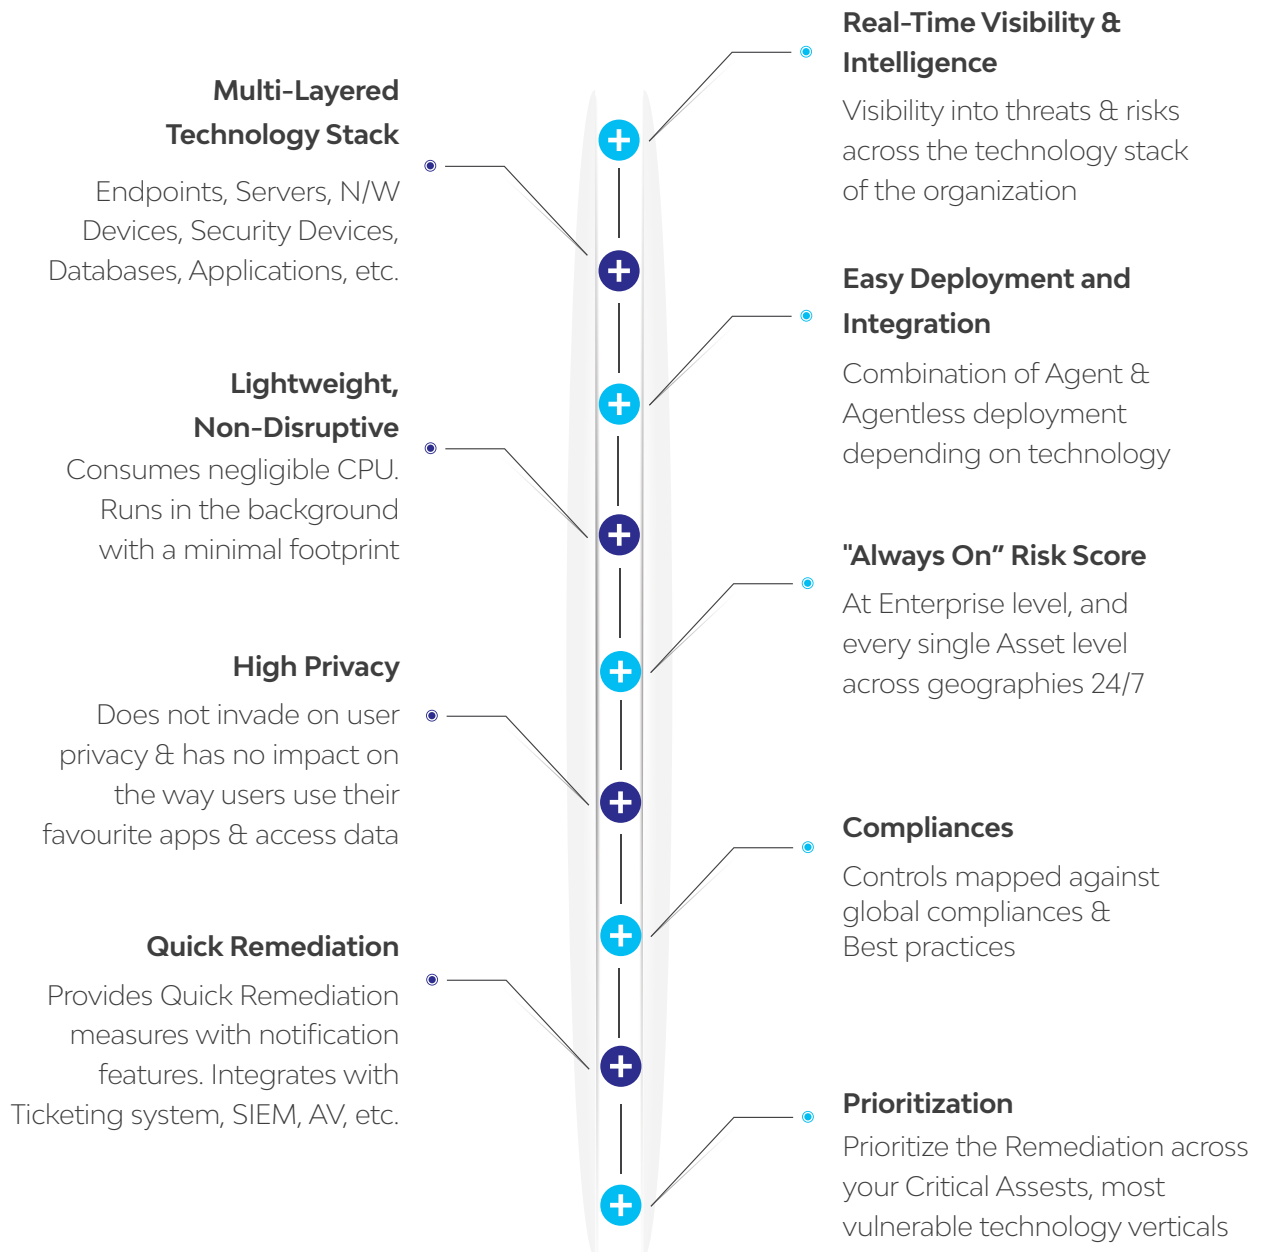

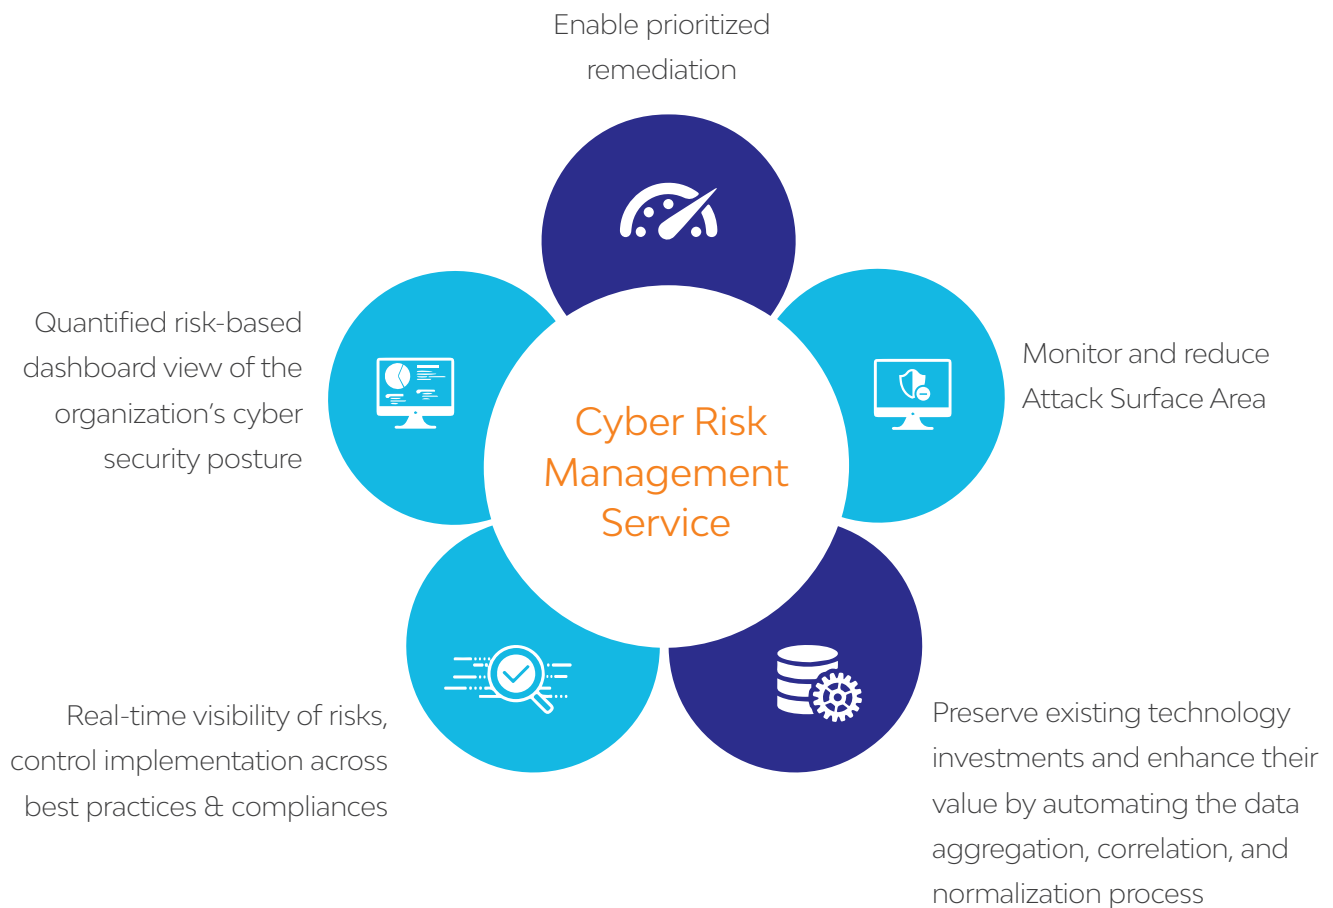

LTI's Cyber Risk Management Services covers

Endpoints

Mobiles

Security Devices

LTI

Cloud

Web-Applications

IoT

Database

Network Devices

LT1

Let's Solve

The service continuously correlates vulnerability data with threat intelligence and business impact to assign a Risk Score for every IT asset in the service scope. This service uses advanced risk scoring and human-interactive machine learning technology that allows you to assign different levels of risk to assets, databases, web applications, and business processes. Based on this, the service can give consolidated risk scores for the technology in scope across any department, location, etc. A consolidated single risk score for the organization is also visible on the dashboard. These risk scores enable organizations to prioritize remediation efforts, and continuously have visibility into the attack surface area.

Key Features

Real-Time Visibility & Intelligence

Visibility into threats & risks across the technology stack of the organization

Multi-Layered Technology Stack

Endpoints, Servers, N/W Devices, Security Devices, Databases, Applications, etc.

Easy Deployment and Integration

Combination of Agent & Agentless deployment depending on technology

Lightweight, Non-Disruptive

Consumes negligible CPU. Runs in the background with a minimal footprint

"Always On" Risk Score

At Enterprise level, and every single Asset level across geographies 24/7

High Privacy

Does not invade on user privacy & has no impact on the way users use their favourite apps & access data

Compliances

Controls mapped against global compliances & Best practices

Quick Remediation

Provides Quick Remediation measures with notification features. Integrates with Ticketing system, SIEM, AV, etc.

Prioritization

Prioritize the Remediation across your Critical Assests, most vulnerable technology verticals

Key Benefits

Enable prioritized remediation

Monitor and reduce Attack Surface Area

Cyber Risk Management Service

Quantified risk-based dashboard view of the organization's cyber security posture

Real-time visibility of risks, control implementation across best practices & compliances

Preserve existing technology investments and enhance their value by automating the data aggregation, correlation, and normalization process
