Case Study

PeopleSoft 9.2 Image #5 to #32 Upgrade for Publicly Traded Provider of Various Forms of Financing to Purchasers and Lessees in North America Global

Client

The customer is a publicly-traded provider of various forms of financing to purchasers and lessees, and authorized independent dealers of automotive products in the United States and Canada.

Challenges

A high volume of customizations.

Unsupported Database DB2 version for some Oracle code.

Parallel project execution impacting tool object versions.

Due to server restrictions, the project required two PUM DEMO Image 32 instances, one for upgrade and one for a P2P implementation project.

A large number of testing scenarios needed to be tested in each validation phase.

LTIMindtree Solution

- Use of LTIMindtree tool-Probe SQR to identify customization at a rapid pace

---

- Use of PTF to reduce effort and time during the testing phase

---

- Strong liaison with Oracle to get the code specific to DB2

- With CDB-PDB backup-restore, LTIMindtree was able to host two PUM demo Image 32 instances on one server

---

- Circumvented code synchronization issues via meticulous project control and monitoring

Business Benefits

20% Customizations replaced with vanilla functionality.

Reusable PeopleSoft test framework scripts developed.

Functional upliftment - enabled **25+** new functionalities.

Stable PeopleSoft ecosystem with bug fixes from the latest image.
