

Let's Solve

Supply Chain Reimagined

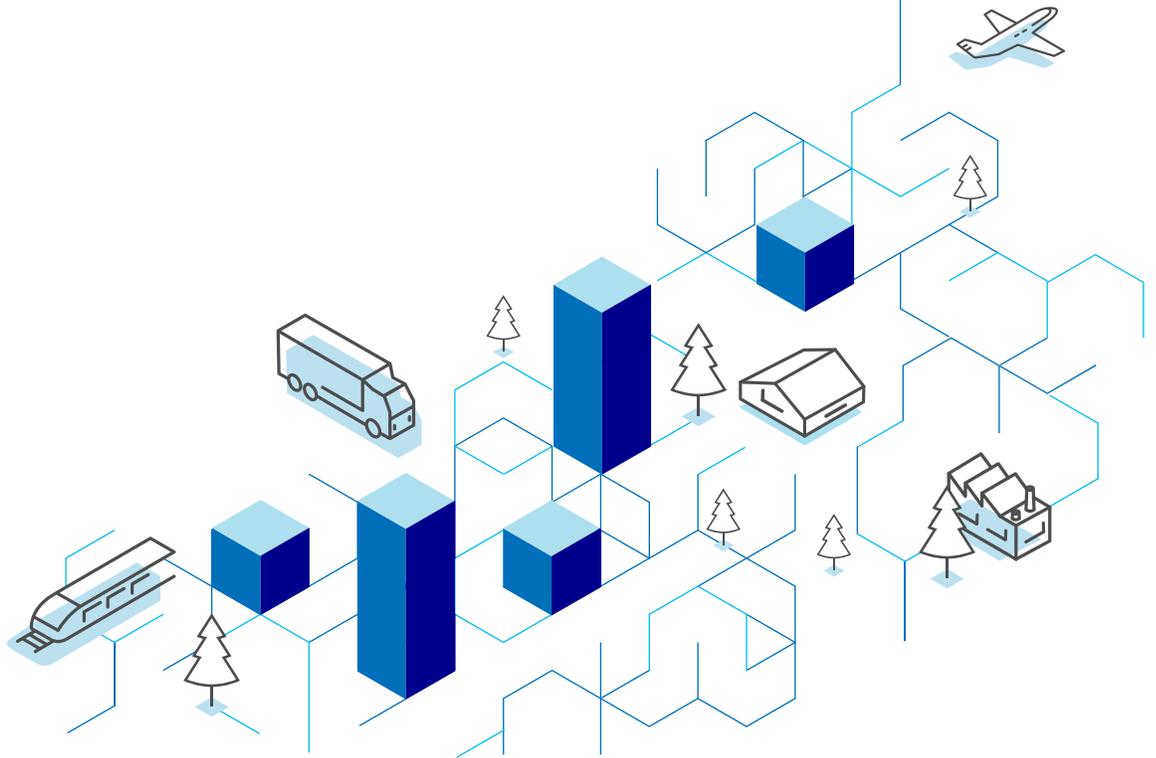

| Resilient

| Connected

| Intelligent

| Sustainable

The Great Restructuring precipitated by the pandemic has permanently altered the way we work, the way we operate our businesses, and the way enterprises create, deliver and capture value. What started as overnight digital interventions to manage operations during the crisis, has now evolved into an accelerated digital adoption for strategic objectives such as digitizing customer engagement, developing just-in-case supply chains, and meeting operational imperatives. We help our clients reimagine every aspect of their enterprise through the power of digital technologies in an agile manner to thrive in the era of the Great Restructuring.

The need for bridging the digital and the physical supply chain is evermore the need of today. With the propagation of the digital supply chain, the need for real-time data to make faster and better decisions has led to organizations investing heavily in digital enablers such as IoT, Cloud, Blockchain, and RPA to deliver the operational value while also including Cobots and 3D Printing to narrow the physical-digital bridge further.

Business Problem

Enterprises are frequently confronted with a complex and disconnected supply chain and procurement landscape. They face issues such as processes mapped to older ways of working, inability to predict the demand accurately on time, long contract cycle times, poor contract compliance, a poor view of risk/performance, poor sourcing strategy execution, inaccurate supplier information, and poor invoice accuracy. This causes unnecessary delays, shortages of required materials, and dissatisfied customers.

Our Solution

LTI, in collaboration with our partner solution providers, can offer comprehensive supply chain planning and end-to-end supply chain management for your organization.

Key benefits for Supply Chain Planning

Reduced Inventories and obsolescence

Enterprise wide supply chain visibility

Higher levels of collaboration

Real-time scenario planning with results in minutes, not days

Elimination of planning silos enabled by concurrent planning processes

Key Benefits in Source to Pay

Optimized sourcing and spend management

Better decision-making due to community-powered data insights

Improved visibility of supply network and risk management

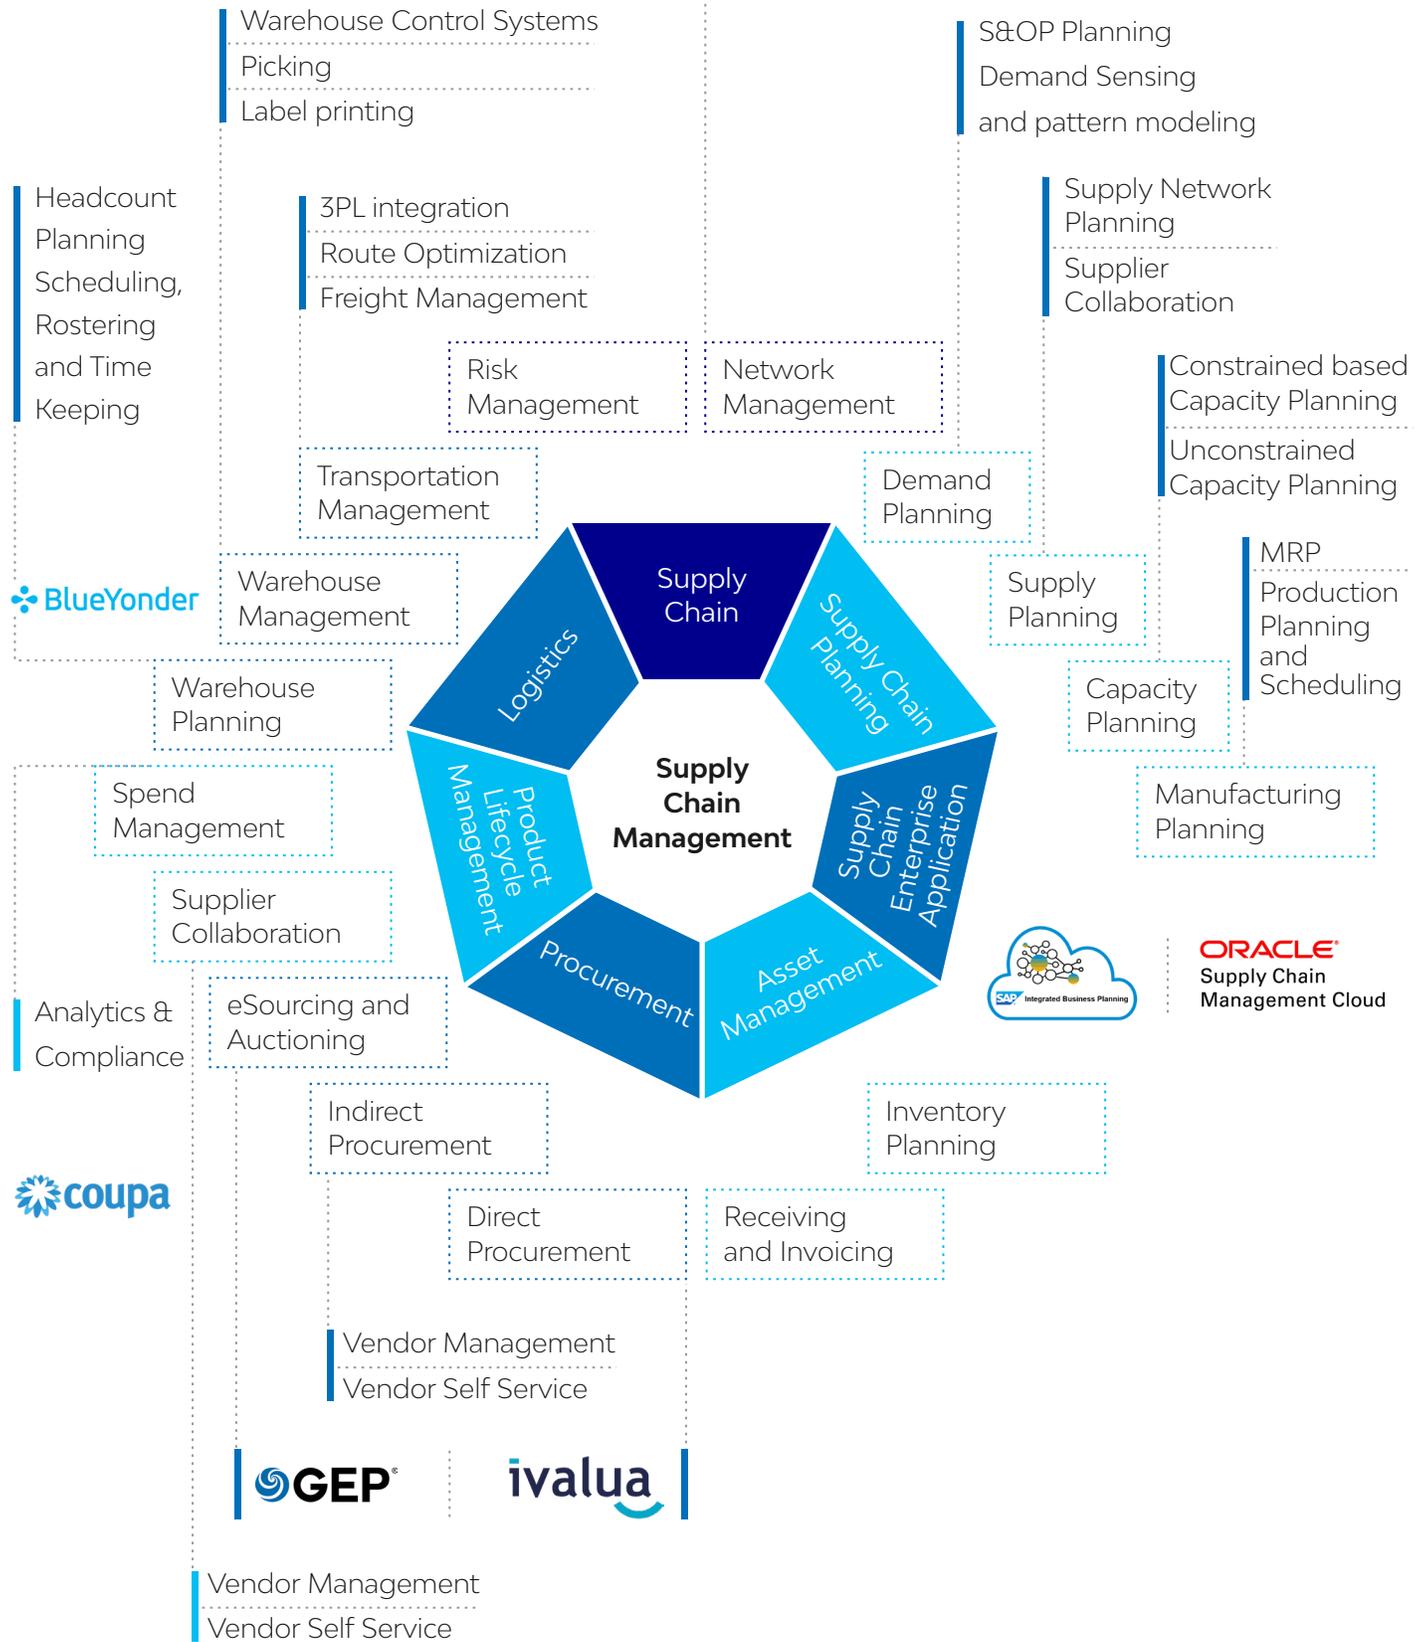

Real-time updates information on material availability

Improved visibility and tracking of incoming and outbound inventories

Leveraging IoT for cold storage and expiry items

Why LTI

Today's state-of-the-art digital tools and technologies can be seamlessly connected to avoid disjointed workflows, improve user experience, and integrate all aspects of a connected supply chain. Systems that power the complex set of supply chain processes respond to changing environmental, geopolitical, and economic conditions and further strengthen your supply base.

The supply chain planning systems market size growth is more than 8-10% per year. This reflects the disaggregation of enterprise ERPS systems to add more functionality to complete the vertically connected stack of applications to streamline your operations, improve supply chain visibility and significantly reduce cost while increasing efficiency. But bringing about a digital transformation with new-age platforms needs a synchronized end-to-end strategy, and the target operating model reimagined.

LTI can help you, and your organization get the most out of your supply chain operations. Our processes assess the change impact and incorporate the industry best practices to make the supply chain sustainable along the journey.
