

CASE STUDY

Material NXT brings visibility and efficiency to the E2E supply chain

Background

Given that providing a critical commodity such as electricity affects the lives of citizens and livelihoods of businesses, the client needed end-to-end visibility into its supply chain—from its factory to storage sites to tower locations.

Challenge

The company's factory, storage sites and tower locations were spread over a huge geographical area. Throughout the enterprise, multiple subcontractors were used and a wide variety of materials was handled. Materials moved through the sites without transparency, leading to deficient demand planning and an inefficient supply chain. The challenges have been listed below:

- The factory lacked the ability to track production status, material coding and storage, bundling and kitting status, dispatches and actual versus planned dispatches.
- The storage sites didn't know the number of full towers, dispatch status, where to store and how to reconcile records to ensure accuracy.
- The tower locations were coming up short in determining where its materials were located, how much stock was available in storage and whether it had received all its requested merchandise.

Solutions

To overcome these challenges, the Material NxT platform was leveraged to fully integrate a track-and-trace solution that manages materials across the company's supply chain in real-time—from anywhere. The solution includes intuitive dashboards that make it easy to accurately monitor material availability, location, utilization, and reconciliation. This provides the client the information they need to work efficiently and ensures end-to-end supply chain visibility from the factory to the final consumption points. The solution comprises:

Benefits

The power company imp roved its demand planning by 15% and infused E2E supply chain efficiency into its complex operation. By working with the Material NxT team, the client achieved multiple benefits, including:

End-to-end supply chain visibility f rom the factory to consumption points

Reduced pi Iferage and stock-out situations

Timely indents and reconciled stocks

About LTIMindtree

LTIMindtree is a global technology consulting and digital solutions company that enables enterprises across industries to reimagine business models, accelerate innovation, and maximize growth by harnessing digital technologies. As a digital transformation partner to more than 700 clients, LTIMindtree brings extensive domain and technology expertise to help drive superior competitive differentiation, customer experiences, and business outcomes in a converging world. Powered by 82,000+ talented and entrepreneurial professionals across more than 30 countries, LTIMindtree — a Larsen & Toubro Group company — combines the industry-acclaimed strengths of erstwhile Larsen and Toubro Infotech and Mindtree in solving the most complex business challenges and delivering transformation at scale.
