Fosfor's Lumin Enhances Its Decision Intelligence Capabilities With Powerful AI And GPT-Based Contextual Narratives

Invited to demonstrate capabilities at the 2023 Gartner® Show Floor Showdown for Analytics and BI Vendors

Orlando, FL – March 21, 2023: Fosfor, the Data Products Unit of [LTIMindtree](#) [NSE: LTIM, BSE: 540005], a global technology consulting and digital solutions company, has announced the latest release of its decision intelligence product, Lumin.

Enterprise leaders face significant challenges leveraging data analytics to identify trends, glean insights and make more effective, business-critical decisions. The emergence of generative AI has created limitless opportunities to interrogate data and deliver actionable insights, such as changes in customer behavior over time that can enable enterprises to deliver more relevant and effective products and content.

Decision augmentation and interactivity are the core themes for Lumin's latest release, making it easy for enterprises to accelerate decision making with minimum effort. With its new enhancements, Lumin identifies insights that have a joint relevance, like those observed in a framework or a process flow, and seamlessly supports the decision maker in their insights journey. This means anyone interacting with Lumin can easily navigate and get related answers to questions without having to think about them. This AI-led insights journey is created using an 'insight' knowledge graph on top of ontology-based knowledge graph, making it a powerful way to freely interact and interrogate data. Lumin's proprietary natural language model has been expanded to include OpenAI's GPT models to automatically generate summarized narratives for business stories created on Lumin. With this integration, it is now possible to leverage the power of generative AI for analytics in a safe and secure manner with real business data.

The attendees at the Gartner® Data and Analytics Summit will get the opportunity to experience these capabilities in-person at the Show Floor Showdown session on **March 22nd at 10:30 am EDT**. This is the second year in a row that Fosfor's Lumin will be exhibited at the Analytics and BI Show Floor session. The summit will address the most significant challenges that data analytics leaders face as they build the innovative and adaptable organizations of the future.

Ashish Rishi, Chief Product Officer at Fosfor, said, "We believe that the true power of data lies in the uncovering of hidden connections and associations that lead to insightful decision journeys. Lumin's connected insights is yet another step towards augmenting and tailoring the analytics experience for ease and agility. Large language models like ChatGPT have opened up new opportunities for revolutionizing how we interact and converse with our data. With Lumin's latest GPT-3 integration, businesses can take advantage of these generative AI models in an easy, secure and reliable manner without compromising on accuracy. We look forward to presenting Lumin's brand new capabilities at the Gartner Show Floor Showdown where attendees will get a glimpse of the technology trends shaping the future of data and analytics."

In addition to GPT-3 integration, Lumin also rolled out a host of other features including threshold-based alerts to identify business critical data deviations, personalized query suggestions for easier navigation and latest SDKs to integrate seamlessly with other BI applications.

About the Gartner Data & Analytics Summit
The Gartner Data & Analytics Summit provides insights for data and analytics leaders to enable a data-and-analytics-centric culture within their organizations by tying strategy to business outcomes and promoting the adoption of technologies, such as artificial intelligence (AI), while

creating a resilient culture that accelerates change and where data literacy, digital trust, governance and data-driven critical thinking are pervasive.

About Fosfor

The Fosfor Product Suite is the only end-to-end suite for optimizing all aspects of the data-to-decisions lifecycle. Fosfor helps you make better decisions, ensuring you have the right data in more hands in the fastest time possible. The Fosfor Product Suite is made up of Spectra, a comprehensive DataOps platform; Refract, a data science and MLOps platform; and Lumin, a decision intelligence platform. Taken together, the Fosfor suite helps businesses discover the hidden value in their data. The Fosfor Data Products Unit is part of LTIMindtree, a global technology consulting and digital solutions company with hundreds of clients and operations in more than 30 countries. For more information, visit www.Fosfor.com.

About LTIMindtree

LTIMindtree is a global technology consulting and digital solutions company that enables enterprises across industries to reimagine business models, accelerate innovation, and maximize growth by harnessing digital technologies. As a digital transformation partner to more than 700 clients, LTIMindtree brings extensive domain and technology expertise to help drive superior competitive differentiation, customer experiences, and business outcomes in a converging world. Powered by nearly 90,000 talented and entrepreneurial professionals across more than 30 countries, LTIMindtree — a Larsen & Toubro Group company — combines the industry-acclaimed strengths of erstwhile Larsen and Toubro Infotech and Mindtree in solving the most complex business challenges and delivering transformation at scale.
